

Summary of risk management plan for Etoricoxib Orion (Etoricoxib) Orion Corporation

Date: 22.03.2022, Version 2

This is a summary of the risk management plan (RMP) for Etoricoxib Orion. The RMP details important risks of Etoricoxib Orion, how these risks can be minimized, and how more information will be obtained about Etoricoxib Orion's risks and uncertainties (missing information).

Etoricoxib Orion's summary of product characteristics (SmPC) and its package leaflet give essential information to healthcare professionals and patients on how Etoricoxib Orion should be used.

Important new concerns or changes to the current ones will be included in updates of Etoricoxib Orion's RMP.

I. The medicine and what it is used for

Etoricoxib Orion is used in adults and adolescents 16 years of age and older for:

- Reducing the pain and swelling (inflammation) in the joints and muscles associated with OA, rheumatoid arthritis (RA), ankylosing spondylitis and gout.
- Short-term treatment of moderate pain associated with dental surgery (see SmPC for the full indication).

It contains etoricoxib as the active substance and it is given by mouth.

II. Risks associated with the medicine and activities to minimise or further characterise the risks

Important risks of Etoricoxib Orion, together with measures to minimise such risks and the proposed studies for learning more about Etoricoxib Orion's risks, are outlined below.

Measures to minimise the risks identified for medicinal products can be:

- Specific information, such as warnings, precautions, and advice on correct use, in the package leaflet and SmPC addressed to patients and healthcare professionals;
- Important advice on the medicine's packaging;
- The authorised pack size — the amount of medicine in a pack is chosen so to ensure that the medicine is used correctly;
- The medicine's legal status — the way a medicine is supplied to the patient (e.g., with or without prescription) can help to minimise its risks.

Together, these measures constitute routine *risk minimisation measures*.

In addition to these measures, information about adverse reactions is collected continuously and regularly analysed, so that immediate action can be taken as necessary. These measures constitute *routine pharmacovigilance activities*.

II.A List of important risks and missing information

Important risks of Etoricoxib Orion are risks that need special risk management activities to further investigate or minimise the risk, so that the medicinal product can be safely taken. Important risks can be regarded as identified or potential. Identified risks are concerns for which there is sufficient proof of a link with the use of Etoricoxib. Potential risks are concerns for which an association with the use of this medicine is possible based on available data, but this association has not been established yet and needs further evaluation. Missing information refers to information on the safety of the medicinal product that is currently missing and needs to be collected (e.g. on the long-term use of the medicine);

List of important risks and missing information	
Important identified risks	• None
Important potential risks	• None
Missing information	• None

II.B Summary of important risks

The safety information in the Product Information is aligned to the reference medicinal product.

II.C Post-authorisation development plan

There are no studies required for Etoricoxib Orion.
