# PART VI SUMMARY OF THE RISK MANAGEMENT PLAN

# SUMMARY OF RISK MANAGEMENT PLAN FOR SPIOLTO RESPIMAT (TIOTROPIUM BROMIDE + OLODATEROL)

In the following, Spiolto/Yanimo Respimat is referred to as Spiolto.

This is a summary of the risk management plan (RMP) for Spiolto. The RMP details important risks of Spiolto, how these risks can be minimised, and how more information will be obtained about Spiolto's risks and uncertainties (missing information).

Spiolto's Summary of Product Characteristics (SmPC) and its package leaflet give essential information to healthcare professionals and patients on how Spiolto should be used.

Important new concerns or changes to the current ones will be included in updates of Spiolto's RMP.

## I. THE MEDICINE AND WHAT IT IS USED FOR

Spiolto is authorised for chronic obstructive pulmonary disease (see SmPC for the full indication). It contains tiotropium bromide + olodaterol as the active substances and it is given by inhalation.

## II. RISKS ASSOCIATED WITH THE MEDICINE AND ACTIVITIES TO MINIMISE OR FURTHER CHARACTERISE THE RISKS

Important risks of Spiolto, together with measures to minimise such risks and the proposed studies for learning more about Spiolto's risks, are outlined below.

Measures to minimise the risks identified for medicinal products can be:

- Specific information, such as warnings, precautions, and advice on correct use, in the package leaflet and SmPC addressed to patients and healthcare professionals;
- Important advice on the medicine's packaging;
- The authorised pack size - the amount of medicine in a pack is chosen so to ensure that the medicine is used correctly;
- The medicine's legal status - the way a medicine is supplied to the patient (e.g. with or without prescription) can help to minimise its risks.

Together, these measures constitute routine risk minimisation measures.

In addition to these measures, information about adverse reactions is collected continuously and regularly analysed so that immediate action can be taken as necessary. This regular analysis includes compilation and assessment of PSURs. All of these measures constitute routine pharmacovigilance activities.

If important information that may affect the safe use of Spiolto is not yet available, it is listed under 'missing information' below.

## II.A List of important risks and missing information

Important risks of Spiolto are risks that need special risk management activities to further investigate or minimise the risk, so that the medicinal product can be safely administered. Important risks can be regarded as identified or potential. Identified risks are concerns for which there is sufficient proof of a link with the use of Spiolto. Potential risks are concerns for which an association with the use of this medicine is possible based on available data, but this association has not been established yet and needs further evaluation. Missing information refers to information on the safety of the medicinal product that is currently missing and needs to be collected (e.g. on the long-term use of the medicine).

|---|---|
| Important identified risks | None |
| Important potential risks | None |
| Missing information | None |

## II.B Summary of important risks

**Important identified risks**
None

**Important potential risks**
None

**Missing information**
None

## II.C Post-authorisation development plan

### II.C.1 Studies which are conditions of the marketing authorisation

There are no studies which are conditions of the marketing authorisation or specific obligation of Spiolto.

### II.C.2 Other studies in post-authorisation development plan

No studies are required for Spiolto.
