Part VI: Summary of the Risk Management Plan

Summary of Risk Management Plan for PIRFENIDONE 267 mg, and 801 mg, film coated tablets¹ (Pirfenidone)

This is a summary of the risk management plan (RMP) for Pirfenidon ratiopharm 267mg und 801mg Filmtabletten and Pirfenidon Actavis 267mg und 801mg Filmtabletten (hereinafter referred to as Pirfenidone). The RMP details important risks of Pirfenidone, how these risks can be minimised, and how more information will be obtained about Pirfenidone's risks and uncertainties (missing information).

Pirfenidone's summary of product characteristics (SmPC) and its package leaflet give essential information to healthcare professionals and patients on how Pirfenidone should be used.

Important new concerns or changes to the current ones will be included in updates of Pirfenidone's RMP.

I. The Medicine and What It is used for

Pirfenidone is authorised the treatment of mild to moderate idiopathic pulmonary fibrosis in adults (see SmPC for the full indication). It contains pirfenidone as the active substance and it is given orally.

II. Risks Associated with the Medicine and Activities to Minimise or Further Characterise the Risks

Important risks of Pirfenidone, together with measures to minimise such risks and the proposed studies for learning more about Pirfenidone's risks, are outlined below.

Measures to minimise the risks identified for medicinal products can be:

- Specific information, such as warnings, precautions, and advice on correct use, in the package leaflet and SmPC addressed to patients and healthcare professionals;
- Important advice on the medicine's packaging;
- The authorised pack size the amount of medicine in a pack is chosen so to ensure that the medicine is used correctly;
- The medicine's legal status the way a medicine is supplied to the patient (e.g. with or without prescription) can help to minimise its risks.

Together, these measures constitute *routine risk minimisation* measures.

In the case of Pirfenidone, these measures are supplemented with *additional risk minimisation measures* mentioned under relevant important risks, below.

In addition to these measures, information about adverse reactions is collected continuously and regularly analysed, so that immediate action can be taken as necessary. These measures constitute *routine pharmacovigilance activities*.

II.A List of Important Risks and Missing Information

Important risks of Pirfenidone are risks that need special risk management activities to further investigate or minimise the risk, so that the medicinal product can be safely taken. Important risks can be regarded as identified or potential. Identified risks are concerns for which there is sufficient proof of a link with the use of Pirfenidone. Potential risks are concerns for which an association with the use of this medicine is possible based on available data, but this association has not been established yet and needs further evaluation. Missing information refers to information on the safety of the medicinal product that is currently missing and needs to be collected (e.g. on the long-term use of the medicine).

Table 8: Summary of Safety Concerns

List of important risks and missing information		
Important identified risks	 Drug-induced liver injury (DILI) Photosensitivity reaction and rash Gastrointestinal symptoms 	
Important potential risks	 Severe skin reactions Risk of medication error in patients transferring between capsules and tablets 	
Missing information	 QT prolongation Underlying specific cardiac events 	

II.B Summary of Important Risks

Table 9: Summary of Pharmacovigilance Activities and Risk Minimisation Activities by Safety Concern

Important identified risk: Drug-induced liver injury (DILI)	
Risk minimisation	Routine risk minimisation measures
measures	SmPC section 4.3, 4.4 and 4.8.
	PL section 2 and 4.
	Prescription only medicine.
	Additional risk minimisation measures
	Physician checklist
	Routine pharmacovigilance activities beyond adverse reactions reporting and signal
	detection
	Follow-up questionnaire.

Important identified	risk: Photosensitivity reaction and rash	
Risk minimisation measures	Routine risk minimisation measures SmPC section 4.2, 4.4 and 4.8. PL section 2. Prescription only medicine Additional risk minimisation measures Physician checklist	
Important identified	risk : Gastrointestinal symptoms	
Risk minimisation measures	Routine risk minimisation measures SmPC section 4.2 and 4.8. PL section 4. Prescription only medicine. Additional risk minimisation measures None	
Important potential risk: Severe skin reactions		
Risk minimisation measures	Routine risk minimisation measures SmPC section 4.2, 4.4 and 4.8. PL section 2, 3 and 4. Prescription only medicine. Additional risk minimisation measures None	
Important potential	risk: Risk of medication error in patients transferring between capsules and tablets	
Risk minimisation measures	Routine risk minimisation measures Prescription only medicine. Additional risk minimisation measures None	
Missing information: QT prolongation		
Risk minimisation measures	Routine risk minimisation measures Prescription only medicine. Additional risk minimisation measures None	
Missing information	Missing information: Underlying specific cardiac events	
Risk minimisation measures	Routine risk minimisation measures Prescription only medicine. Additional risk minimisation measures None

II.C Post-Authorisation Development Plan

II.C.1 Studies Which Are Conditions of the Marketing Authorisation

There are no studies which are conditions of the marketing authorisation or specific obligation of Pirfenidone.

II.C.2 Other Studies in Post-Authorisation Development Plan

There are no studies required for Pirfenidone.
